

Sentinel

Compliance-as-CI for healthcare and fintech

\$50K + 6 months → \$0 + 4 minutes per PR.

github.com/vaatus/sentinel · Built with IBM Bob IDE

The problem

Fortune 500 healthcare and fintech spend **\$5M–\$50M / year** on compliance audits.

Engineers chase PHI by hand for **6 months**. The violation ships anyway.

Compliance is **periodic**. Sentinel makes it **continuous**.

Three surfaces, one Bob brain

Surface	Closes the loop by
 Bob IDE skill pack	<code>/audit-hipaa</code> inline in every editor
 GitHub Actions agent	Fails the check on critical findings — merge blocked
 CLI + dashboard	Batch audit + auto-remediation + closed-loop verification

One YAML file → every PR is gated by a Bob-powered auditor.

ROI math

Status quo	With Sentinel
\$50K × 2 / yr external audits	\$0
4 engineer-months / yr	< 1 engineer-day / yr
Per-PR cost	\$0.03

Net cost-out: **\$100K+ / year per repo**. Install: **10 minutes**.

Built with Bob IDE — receipts

12 task sessions · \$18.72 / 40 Bobcoins · 47% utilization

Bob shipped	Cost
Six baseline sessions (audit, §164.310 control, tests, refactor, review, 26 docs)	\$6.62
<code>sentinel watch</code> agentic CI scanner	\$2.52
GDPR (4th framework) — 20-minute proof of extensibility	\$3.26
<code>sentinel init</code> interactive wizard	\$1.11
Multi-framework solutions in demo app	\$1.38

Why this matters to IBM

30 compliance controls · 4 frameworks · 1 product

HIPAA · SOC 2 · PCI · GDPR

Drop `.bob/custom_modes.yaml` into any team's editor → every developer becomes a compliance auditor.

Sentinel makes Bob IDE the answer to a **\$50B / year enterprise spend.**

Thank you.
